NEVI Bid Detail

Overview & Sample Screenshots

NEVI Bid Detail Overview

The NEVI Bid Detail database will capture dozens of fields of data and information across hundreds (and eventually thousands) of NEVI bids (both winning and losing bids). The data is assembled from public sources, information obtained from states via Freedom of Information Act Requests (FOIA), as well as outreach to states, other sources, and estimates where data cannot be obtained.

Data/Information categories include:

- Bidder information
- Site and site host information
- State and state program (non-NEVI bids may be captured in the future as well)
- Hardware: Provider brand, kW, number for ports, battery storage - provider, kWh (if included)
- Charging network, network software provider
- Funding requests
- Match %
- Demand charge estimates (if the state asks for it)
- Calculations of cost per port, etc.

Maine

Irving Oil

Segment 3, Freeport to Ellsworth

Bidder Full/Legal Name	Irving Oil
Program	NEVI
Site ID	Maine-06
